Data Quality:

- All data has been analyzed and profiled by the Data Quality component of watsonx. data intelligence before being cataloged to the governed catalog where the data product was produced from. The data is of the highest quality and can be trusted and used with confidence for analytical and AI use cases to produce reliable and contextualized business outcomes.
- A Data Quality SLA (Service Level Agreement) workflow and rule have been created to ensure all zip codes are in the correct format and have been verified by the Data Quality Analyst to ensure no errors or inconsistencies in the format of US zip codes.

SLA: All the data assets will be continuously updated in the governed catalog to ensure the most current and up to data, fully enriched my metadata to fully understand the data content and context that can be used for trusted and reliable analytics and AI projects.

Usage Policies:

- **Allowed Use:** Any analytic or sales use case that needs trusted Employee and Warehouse staffing data.
- **Prohibited Use:** Direct customer identification for cold outreach or sales calls; any use that violates GDPR or CCPA.

Security & Access: All the data assets will be continuously monitored in the governed catalog and autonomously protected by data protection rules to ensure Sensitive and Personally Identifiable Information is obfuscated to ensure those that do not have the ability to view the real values will only have access to fictionalized but contextually correct values.
